

FLOW BLM

# Business Operating System Module & Building-Block Architecture v1.0

A capability-first reference for compiling the minimum sufficient operating system for any business

60

reusable modules

24

source capability families

15

cross-functional value streams

54

industry-family overlays

**Design principle**

BLM should infer what the business must be able to do, then compile the smallest coherent set of modules and building blocks that covers those capabilities. Industry is a prior; it is never a direct module template.

Research basis: Flow architecture + current primary standards and practical ERP cross-checks

# 1. Executive Research Verdict

**The proposed asset is highly valuable for BLM.** The global business taxonomy tells BLM what kind of business it is looking at. This Operating System reference tells BLM what that business may need to operate: capabilities, modules, records, workflows, rules, metrics, integrations, controls and AI boundaries.

## Do not build an industry-to-ERP lookup table

Flow v3 explicitly rejects the pattern "industry code -> modules." Requirements depend on operating model, scale, value streams, customer journey, transaction load, workforce coordination, regulation, asset/inventory intensity, current systems, goals and pain. Module selection is therefore a constrained solution-design problem.

**Research convergence.** Flow's capability model, APQC process architecture, OMG BPMN/DMN/CMMN, UN/CEFACT semantic components, UBL documents, current ERP product families, and API standards all support a layered design in which process, data, decisions, documents, software capabilities and execution are distinct but connected.

**Practical result.** This document defines 60 reusable modules. They are intentionally more stable than vendor application names and more deployable than abstract capabilities. Industry packs specialize these modules rather than duplicating them.

## 1.1 What a module means in Flow

- Capability = what the business must be able to do.
- Module = a deployable application-capability bundle that realizes one or more capabilities.
- Building block = reusable implementation primitive inside/between modules.
- Industry pack = probability, terminology, entity, workflow, metric and rule specialization on top of universal modules.
- Blueprint = approved selection of capabilities, modules, workflows, data, roles, logic, integrations and implementation waves for one workspace.

## 1.2 Module classes

| Class       | Meaning                                                          | Selection rule                                          |
|-------------|------------------------------------------------------------------|---------------------------------------------------------|
| FOUNDATION  | Platform primitives needed by most governed workspaces           | Install once; maturity varies by scale.                 |
| UNIVERSAL   | Common business modules across many archetypes                   | Recommend from direct capability/value-stream evidence. |
| CONDITIONAL | Needed only when business physics or operating model triggers it | Do not install from industry label alone.               |

# 2. Capability-to-Module-to-Building-Block Architecture

The intended compile path is:

BUSINESS TWIN -> CAPABILITY GAPS -> VALUE STREAMS -> MODULE CANDIDATES -> MINIMUM SOLUTION -> BUILDING BLOCKS -> WORKFLOWS / RULES / DATA / UI / INTEGRATIONS -> APPROVED BLUEPRINT -> BUILDING BLOCK ENGINE

## 2.1 Building-block types

| Type         | Purpose                                                   | Authority note                                                              |
|--------------|-----------------------------------------------------------|-----------------------------------------------------------------------------|
| ENTITY       | Canonical business record/object                          | BLM may interpret/draft; authoritative state/rules/actions remain governed. |
| DOCUMENT     | Controlled business artifact                              | BLM may interpret/draft; authoritative state/rules/actions remain governed. |
| WORKFLOW     | BPMN-like structured flow or CMMN-like adaptive case      | BLM may interpret/draft; authoritative state/rules/actions remain governed. |
| STATE        | Lifecycle and allowed transitions                         | BLM may interpret/draft; authoritative state/rules/actions remain governed. |
| RULE         | Policy/validation/eligibility/threshold/state rule        | BLM may interpret/draft; authoritative state/rules/actions remain governed. |
| DECISION     | DMN/native deterministic decision                         | BLM may interpret/draft; authoritative state/rules/actions remain governed. |
| ROLE         | Workspace responsibility / performer / accountable owner  | BLM may interpret/draft; authoritative state/rules/actions remain governed. |
| PERMISSION   | Authorization capability / segregation boundary           | BLM may interpret/draft; authoritative state/rules/actions remain governed. |
| METRIC       | Defined KPI/measure with grain, units and formula variant | BLM may interpret/draft; authoritative state/rules/actions remain governed. |
| LOGIC        | Versioned deterministic calculation/validation            | BLM may interpret/draft; authoritative state/rules/actions remain governed. |
| UI_BLOCK     | View, form, queue, board, 360 page, dashboard             | BLM may interpret/draft; authoritative state/rules/actions remain governed. |
| EVENT        | Business event for audit/process intelligence             | BLM may interpret/draft; authoritative state/rules/actions remain governed. |
| NOTIFICATION | Governed message/alert/approval request                   | BLM may interpret/draft; authoritative state/rules/actions remain governed. |
| INTEGRATION  | Adapter capability and canonical mapping                  | BLM may interpret/draft; authoritative state/rules/actions remain governed. |
| AI_SKILL     | BLM analysis/drafting/diagnosis skill                     | BLM may interpret/draft; authoritative state/rules/actions remain governed. |

| Type       | Purpose                                           | Authority note                                                              |
|------------|---------------------------------------------------|-----------------------------------------------------------------------------|
| SOR_POLICY | Authoritative ownership and reconciliation policy | BLM may interpret/draft; authoritative state/rules/actions remain governed. |

## 2.2 Capability maturity M0-M7

- M0 Not needed:** Capability deliberately absent  
**M1 Manual:** People/spreadsheets/email perform work  
**M2 Structured:** Records/forms exist; workflow inconsistent  
**M3 Standardized:** Defined process, roles and data  
**M4 Integrated:** Cross-module/system handoffs connected  
**M5 Automated:** Rules/automation handle routine work  
**M6 AI-assisted:** BLM diagnoses/drafts/plans within governance  
**M7 Governed autonomous:** Approved bounded actions execute with monitoring

## 2.3 Minimal-solution rule

### Optimization objective

Maximize required-capability coverage, business value, interoperability and reuse of existing systems. Minimize new modules, duplicate systems of record, implementation effort, change burden, data migration, integration risk and ongoing cost. All P0 capabilities, security and regulatory constraints must still be covered.

## 3. Flow Capability Families -> 60 Module Packages

| Flow capability family                       | Compiled module IDs                                                    | Interpretation                                                                                       |
|----------------------------------------------|------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|
| Strategy, Governance & Enterprise Management | GOV-01, GOV-02, GOV-03, FND-01                                         | Module split is Flow synthesis for deployability; the source capability remains the semantic parent. |
| Customer & Relationship Management           | REV-01, REV-05                                                         | Module split is Flow synthesis for deployability; the source capability remains the semantic parent. |
| Marketing & Demand Generation                | REV-02                                                                 | Module split is Flow synthesis for deployability; the source capability remains the semantic parent. |
| Sales & Commercial Management                | REV-04, REV-05, REV-06, REV-07, REV-08                                 | Module split is Flow synthesis for deployability; the source capability remains the semantic parent. |
| Product / Service & Pricing                  | REV-03, REV-04                                                         | Module split is Flow synthesis for deployability; the source capability remains the semantic parent. |
| Project / Engagement Management              | OPS-10                                                                 | Module split is Flow synthesis for deployability; the source capability remains the semantic parent. |
| Service Operations                           | REV-09, OPS-11                                                         | Module split is Flow synthesis for deployability; the source capability remains the semantic parent. |
| Finance & Treasury                           | FIN-01, FIN-02, FIN-03, FIN-04, FIN-05, FIN-06, FIN-07, FIN-08, FIN-09 | Module split is Flow synthesis for deployability; the source capability remains the semantic parent. |
| Procurement & Supplier Management            | OPS-01, OPS-02                                                         | Module split is Flow synthesis for deployability; the source capability remains the semantic parent. |
| Inventory & Warehouse                        | OPS-03, OPS-04                                                         | Module split is Flow synthesis for deployability; the source capability remains the semantic parent. |
| Supply Chain & Logistics                     | OPS-05, OPS-06                                                         | Module split is Flow synthesis for deployability; the source capability remains the semantic parent. |
| Manufacturing / Production                   | OPS-07                                                                 | Module split is Flow synthesis for deployability; the source capability remains the semantic parent. |
| Quality Management                           | OPS-08                                                                 | Module split is Flow synthesis for deployability; the source capability remains the semantic parent. |
| Workforce / HR                               | PEO-01, PEO-02, PEO-03, PEO-04, PEO-05, PEO-06, PEO-07                 | Module split is Flow synthesis for deployability; the source capability remains the semantic parent. |
| Asset & Maintenance                          | OPS-09, FIN-09                                                         | Module split is Flow synthesis for deployability; the source capability remains the semantic parent. |
| Documents, Knowledge & Records               | FND-05, DAT-07                                                         | Module split is Flow synthesis for deployability; the source capability remains the semantic parent. |
| Compliance, Controls & Risk                  | GOV-04, GOV-05, GOV-06                                                 | Module split is Flow synthesis for deployability; the source capability remains the semantic parent. |
| Analytics, Planning & Decision Support       | DAT-02, DAT-03, DAT-04, DAT-05, DAT-06                                 | Module split is Flow synthesis for deployability; the source capability remains the semantic parent. |
| Customer Service & Success                   | REV-09, REV-10                                                         | Module split is Flow synthesis for deployability; the source capability remains the semantic parent. |
| Commerce / POS / Marketplace                 | REV-08, OPS-12                                                         | Module split is Flow synthesis for deployability; the source capability remains the semantic parent. |
| Rental / Reservation / Hospitality           | OPS-12                                                                 | Module split is Flow synthesis for deployability; the source capability remains the semantic parent. |
| Construction / Field Delivery                | OPS-10, OPS-11                                                         | Module split is Flow synthesis for deployability; the source capability remains the semantic parent. |
| Data, Integration & Interoperability         | DAT-01, FND-06                                                         | Module split is Flow synthesis for deployability; the source capability remains the semantic parent. |
| Security & Access                            | FND-02, FND-07                                                         | Module split is Flow synthesis for deployability; the source capability remains the semantic parent. |

## 4. Module Registry

Each record is intentionally compact but machine-oriented. “Authority boundary” is part of the module definition, not a prompt-only instruction.

### Foundation

#### FND-01 - Organization, Workspace & Legal-Entity Core [FOUNDATION]

|                               |                                                                                              |                           |                                                                                                                                                                          |
|-------------------------------|----------------------------------------------------------------------------------------------|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Outcome</b>                | Represent the organization, entities, branches, sites and workspace boundaries consistently. | <b>Building blocks</b>    | Workspace registry; Legal entity/branch/site registry; Organization hierarchy; Business unit/cost center dimensions; Operating calendar; Currency/unit/timezone profiles |
| <b>Canonical records</b>      | Workspace; LegalEntity; Branch; Site; BusinessUnit; Calendar                                 | <b>Key workflows</b>      | Create workspace; Create entity/branch/site; Assign organizational ownership; Activate/deactivate unit                                                                   |
| <b>Metrics</b>                | active entities; sites by entity; organizational span; configuration completeness            | <b>Rules / decisions</b>  | entity uniqueness; effective-date hierarchy; workspace isolation; legal-entity posting boundary                                                                          |
| <b>BLM role</b>               | Explain organizational structure; detect missing ownership; never invent legal status.       | <b>Dependencies</b>       | FND-02, FND-03                                                                                                                                                           |
| <b>Applicability triggers</b> | multi-entity; multi-site; branch/network operations; regulated entity separation             | <b>Authority boundary</b> | No model-created legal entity becomes authoritative without approved configuration.                                                                                      |

#### FND-02 - Identity, Access, Roles & Segregation [FOUNDATION]

|                               |                                                                                                        |                           |                                                                                                                                                                      |
|-------------------------------|--------------------------------------------------------------------------------------------------------|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Outcome</b>                | Ensure every read, decision and action occurs under explicit identity, role and permission boundaries. | <b>Building blocks</b>    | Identity registry; Workspace membership; Business roles; Authorization roles; Record/field access; Approval authority; Segregation-of-duties rules; Secrets boundary |
| <b>Canonical records</b>      | User; Identity; Role; Permission; Membership; AccessPolicy                                             | <b>Key workflows</b>      | Provision access; Change role; Request access; Approve privileged access; Revoke/offboard access                                                                     |
| <b>Metrics</b>                | privileged users; access exceptions; SoD violations; stale access; approval latency                    | <b>Rules / decisions</b>  | least privilege; tenant isolation; maker-checker; SoD; privileged-action gate                                                                                        |
| <b>BLM role</b>               | Summarize access posture and propose changes; never grant or bypass permission directly.               | <b>Dependencies</b>       | FND-01, FND-07                                                                                                                                                       |
| <b>Applicability triggers</b> | all businesses; sensitive data; multi-user workspaces                                                  | <b>Authority boundary</b> | Authorization is deterministic; BLM understanding never grants authority.                                                                                            |

#### FND-03 - Party, Contact & Master-Data Core [FOUNDATION]

|                               |                                                                                                    |                           |                                                                                                                                                                     |
|-------------------------------|----------------------------------------------------------------------------------------------------|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Outcome</b>                | Maintain canonical identities for customers, suppliers, partners, people and shared master data.   | <b>Building blocks</b>    | Party registry; Organization/person/contact; Address and communication points; Identifiers/aliases; Classification/tags; Duplicate detection; Golden-record linkage |
| <b>Canonical records</b>      | Party; Person; Organization; Contact; Address; Identifier                                          | <b>Key workflows</b>      | Create/update party; Merge duplicate; Verify identifier; Assign relationship/owner                                                                                  |
| <b>Metrics</b>                | duplicate rate; master-data completeness; unmatched identifiers; merge exceptions                  | <b>Rules / decisions</b>  | unique identifiers; merge survivorship; workspace alias confirmation; restricted-field policy                                                                       |
| <b>BLM role</b>               | Resolve names and aliases; suggest likely duplicates; never merge records without governed action. | <b>Dependencies</b>       | FND-01, FND-02                                                                                                                                                      |

| <b>BLM role</b>               | Draft and explain offers; deterministic pricing/approval controls remain authoritative.  | <b>Dependencies</b>       | REV-03, REV-04, GOV-03, FND-05                                                                                 |
| <b>Applicability triggers</b> | configured products; B2B proposals; project services                                     | <b>Authority boundary</b> | Sending/accepting is action-gated.                                                                             |

**REV-07 - Contracts, Subscriptions & Entitlements [CONDITIONAL]**

|                               |                                                                                                          |                           |                                                                                                                                 |
|-------------------------------|----------------------------------------------------------------------------------------------------------|---------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| <b>Outcome</b>                | Govern commercial commitments, recurring arrangements, renewals and service entitlements.                | <b>Building blocks</b>    | Contract registry; Obligations; Versions/amendments; Renewal dates; Subscription; Entitlement; Usage/term boundary; Termination |
| <b>Canonical records</b>      | Contract; Amendment; Subscription; Entitlement; Obligation                                               | <b>Key workflows</b>      | Draft contract; Review/approve; Execute boundary; Amend; Renew; Suspend; Terminate                                              |
| <b>Metrics</b>                | renewal rate; contract cycle; obligation breaches; expiring contracts; MRR/ARR inputs                    | <b>Rules / decisions</b>  | signature authority; effective date; renewal/termination; entitlement eligibility                                               |
| <b>BLM role</b>               | Extract obligations and draft language; legal interpretation/current law requires appropriate authority. | <b>Dependencies</b>       | FND-05, GOV-03, REV-04                                                                                                          |
| <b>Applicability triggers</b> | recurring revenue; contracted services; enterprise sales                                                 | <b>Authority boundary</b> | BLM cannot execute contract or waive legal rights autonomously.                                                                 |

**REV-08 - Order Management [CONDITIONAL]**

|                               |                                                                                   |                           |                                                                                                                         |
|-------------------------------|-----------------------------------------------------------------------------------|---------------------------|-------------------------------------------------------------------------------------------------------------------------|
| <b>Outcome</b>                | Translate accepted demand into controlled fulfillment commitments.                | <b>Building blocks</b>    | Sales order; Line commitments; Availability/ATP boundary; Allocation; Backorder; Change/cancel; Delivery/billing status |
| <b>Canonical records</b>      | SalesOrder; OrderLine; Commitment; Backorder                                      | <b>Key workflows</b>      | Create order; Confirm; Allocate; Change; Cancel; Release to fulfillment                                                 |
| <b>Metrics</b>                | order cycle; backorder rate; fill rate; cancellation; order exceptions            | <b>Rules / decisions</b>  | credit/availability; order status; change authority; fulfillment eligibility                                            |
| <b>BLM role</b>               | Explain order status and exceptions; order confirmation/cancellation is governed. | <b>Dependencies</b>       | REV-03, OPS-03, FIN-02                                                                                                  |
| <b>Applicability triggers</b> | product/fulfilment businesses                                                     | <b>Authority boundary</b> | No inventory/credit assumption without authoritative checks.                                                            |

**REV-09 - Customer Service, Case & SLA [CONDITIONAL]**

|                               |                                                                                               |                           |                                                                                                                    |
|-------------------------------|-----------------------------------------------------------------------------------------------|---------------------------|--------------------------------------------------------------------------------------------------------------------|
| <b>Outcome</b>                | Receive, triage, resolve and learn from customer issues under service commitments.            | <b>Building blocks</b>    | Case/ticket; Queue/routing; Priority; SLA timers; Knowledge links; Escalation; Resolution; Service credit boundary |
| <b>Canonical records</b>      | Case; Queue; SLA; Resolution; Escalation                                                      | <b>Key workflows</b>      | Open case; Classify; Assign; Respond; Escalate; Resolve; Verify/close                                              |
| <b>Metrics</b>                | first response; resolution time; SLA attainment; reopen rate; CSAT                            | <b>Rules / decisions</b>  | priority rules; SLA calendar; refund/credit authority; escalation                                                  |
| <b>BLM role</b>               | Summarize cases, draft responses, suggest resolution; refunds/credits remain bounded actions. | <b>Dependencies</b>       | FND-04, FND-08, REV-01                                                                                             |
| <b>Applicability triggers</b> | support/service obligations; customer-facing businesses                                       | <b>Authority boundary</b> | Model cannot fabricate resolution or compensation approval.                                                        |

**REV-10 - Customer Success, Renewal, Loyalty & Feedback [CONDITIONAL]**

|                               |                                                                                                          |                           |                                                                                                                     |
|-------------------------------|----------------------------------------------------------------------------------------------------------|---------------------------|---------------------------------------------------------------------------------------------------------------------|
| <b>Outcome</b>                | Drive adoption, realized value, retention and renewal using evidence rather than superficial engagement. | <b>Building blocks</b>    | Onboarding plan; Success goals; Adoption/usage; Health evidence; Renewal; Expansion; Feedback/NPS boundary; Loyalty |
| <b>Canonical records</b>      | SuccessPlan; HealthSignal; Renewal; Feedback; LoyaltyAccount                                             | <b>Key workflows</b>      | Onboard; Review value; Flag risk; Renew; Expand; Capture feedback                                                   |
| <b>Metrics</b>                | retention; NRR inputs; time-to-value; adoption; renewal risk; repeat rate                                | <b>Rules / decisions</b>  | health-score definition; renewal authority; offer eligibility; consent                                              |
| <b>BLM role</b>               | Diagnose churn/adoption and prepare account plan; health scores must expose evidence.                    | <b>Dependencies</b>       | REV-01, REV-07, DAT-02                                                                                              |
| <b>Applicability triggers</b> | subscription; membership; repeat-service businesses                                                      | <b>Authority boundary</b> | Do not infer customer intent or vulnerable traits without evidence.                                                 |

## Finance

### FIN-01 - General Ledger, Close & Record-to-Report [UNIVERSAL]

|                               |                                                                                                    |                           |                                                                                                                                     |
|-------------------------------|----------------------------------------------------------------------------------------------------|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| <b>Outcome</b>                | Maintain governed accounting records, close periods and produce reproducible financial statements. | <b>Building blocks</b>    | Chart of accounts; Dimensions; Journals; Posting engine; Reconciliation; Period close; Consolidation boundary; Financial statements |
| <b>Canonical records</b>      | Account; JournalEntry; Ledger; Period; Reconciliation                                              | <b>Key workflows</b>      | Post transaction; Reconcile; Adjust; Close/reopen period; Report                                                                    |
| <b>Metrics</b>                | close duration; unreconciled items; posting errors; adjustments; statement balance                 | <b>Rules / decisions</b>  | double entry; period state; posting authority; currency; accounting policy                                                          |
| <b>BLM role</b>               | Explain results and variances; authoritative postings and statements come from ledger logic.       | <b>Dependencies</b>       | FND-01, GOV-03, FND-07                                                                                                              |
| <b>Applicability triggers</b> | all businesses with formal books                                                                   | <b>Authority boundary</b> | BLM never fabricates journal entries or treats prose arithmetic as ledger truth.                                                    |

### FIN-02 - Billing, Invoicing & Accounts Receivable [UNIVERSAL]

|                               |                                                                                       |                           |                                                                                                                               |
|-------------------------------|---------------------------------------------------------------------------------------|---------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| <b>Outcome</b>                | Create receivables from governed commercial events and track customer balances.       | <b>Building blocks</b>    | Billing schedules; Invoice draft/post; Taxes boundary; Credit/debit notes; AR open items; Aging; Payment allocation; Disputes |
| <b>Canonical records</b>      | Invoice; InvoiceLine; CreditNote; ARItem; BillingSchedule                             | <b>Key workflows</b>      | Generate draft; Approve/post; Send; Apply credit; Allocate payment; Dispute; Reverse/correct                                  |
| <b>Metrics</b>                | DSO; AR aging; billing lag; invoice error rate; unbilled revenue                      | <b>Rules / decisions</b>  | invoice state; tax logic route; posting authority; credit note/reversal; revenue source                                       |
| <b>BLM role</b>               | Draft invoice explanations and identify aging risk; posting/sending remains governed. | <b>Dependencies</b>       | FIN-01, REV-08, REV-07                                                                                                        |
| <b>Applicability triggers</b> | all credit/billing businesses                                                         | <b>Authority boundary</b> | Posted financial records should be corrected/reversed, not silently deleted.                                                  |

### FIN-03 - Credit, Collections & Receivables Risk [CONDITIONAL]

|                               |                                                                                         |                           |                                                                                                                    |
|-------------------------------|-----------------------------------------------------------------------------------------|---------------------------|--------------------------------------------------------------------------------------------------------------------|
| <b>Outcome</b>                | Manage customer credit exposure, collection workflow and cash-risk interventions.       | <b>Building blocks</b>    | Credit policy; Credit limit; Exposure; Collections queue; Dunning/reminders; Promise-to-pay; Disputes; Credit hold |
| <b>Canonical records</b>      | CreditProfile; Exposure; CollectionCase; PromiseToPay                                   | <b>Key workflows</b>      | Assess credit; Review exposure; Send approved reminder; Escalate; Place/release hold                               |
| <b>Metrics</b>                | overdue exposure; collections effectiveness; promise kept; bad debt; credit exceptions  | <b>Rules / decisions</b>  | credit eligibility; limit override; hold/release authority; collection cadence                                     |
| <b>BLM role</b>               | Prioritize collection risk and draft outreach; credit hold/write-off requires approval. | <b>Dependencies</b>       | FIN-02, REV-01, GOV-03                                                                                             |
| <b>Applicability triggers</b> | B2B credit; material receivables                                                        | <b>Authority boundary</b> | No adverse customer action from model score alone.                                                                 |

### FIN-04 - Accounts Payable, Expenses & Spend Processing [UNIVERSAL]

|                               |                                                                                           |                           |                                                                                                       |
|-------------------------------|-------------------------------------------------------------------------------------------|---------------------------|-------------------------------------------------------------------------------------------------------|
| <b>Outcome</b>                | Control supplier liabilities and employee/business spend through matching and approvals.  | <b>Building blocks</b>    | Supplier invoice; 3-way match; Expense claim; Advance; AP aging; Approval; Payment readiness; Dispute |
| <b>Canonical records</b>      | SupplierInvoice; APItem; Expense; Advance; Match                                          | <b>Key workflows</b>      | Capture bill; Match; Approve; Dispute; Schedule payment; Reimburse                                    |
| <b>Metrics</b>                | DPO; AP aging; match exceptions; expense cycle; duplicate invoice rate                    | <b>Rules / decisions</b>  | duplicate detection; PO/match tolerance; expense policy; approval threshold                           |
| <b>BLM role</b>               | Classify spend and explain exceptions; payment authorization remains deterministic/human. | <b>Dependencies</b>       | FIN-01, OPS-01, FND-04                                                                                |
| <b>Applicability triggers</b> | all businesses with suppliers/expenses                                                    | <b>Authority boundary</b> | BLM cannot approve own or privileged spend.                                                           |

**FIN-05 - Payments, Treasury, Cash & Bank Reconciliation [UNIVERSAL]**

|                               |                                                                                         |                           |                                                                                                                                             |
|-------------------------------|-----------------------------------------------------------------------------------------|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Outcome</b>                | Control money movement, bank positions, reconciliation and short-term liquidity.        | <b>Building blocks</b>    | Bank/cash accounts; Payment instructions; Receipts; Bank feeds; Reconciliation; Cash position; Liquidity forecast inputs; Payment approvals |
| <b>Canonical records</b>      | BankAccount; Payment; Receipt; BankTransaction; CashPosition                            | <b>Key workflows</b>      | Receive payment; Prepare payment; Approve/release; Import bank; Reconcile; Forecast cash                                                    |
| <b>Metrics</b>                | cash balance; reconciliation lag; payment failure; liquidity buffer; unmatched cash     | <b>Rules / decisions</b>  | maker-checker; trusted account; payment limit; bank reconciliation; currency                                                                |
| <b>BLM role</b>               | Explain cash movement and prepare payment proposals; no direct money movement from LLM. | <b>Dependencies</b>       | FIN-01, FIN-02, FIN-04, FND-02                                                                                                              |
| <b>Applicability triggers</b> | all businesses                                                                          | <b>Authority boundary</b> | Payment execution is one of the highest Action Wall classes.                                                                                |

**FIN-06 - Budgeting, FP&A & Financial Forecasting [CONDITIONAL]**

|                               |                                                                                    |                           |                                                                                                            |
|-------------------------------|------------------------------------------------------------------------------------|---------------------------|------------------------------------------------------------------------------------------------------------|
| <b>Outcome</b>                | Plan financial outcomes, compare actuals to plan and expose uncertainty.           | <b>Building blocks</b>    | Budget versions; Driver assumptions; Forecast; Scenario; Variance; Cash runway; Department/project budgets |
| <b>Canonical records</b>      | Budget; Forecast; Scenario; Assumption; Variance                                   | <b>Key workflows</b>      | Create budget; Revise forecast; Run scenario; Compare actual; Review variance                              |
| <b>Metrics</b>                | forecast error; budget variance; runway; plan attainment; assumption sensitivity   | <b>Rules / decisions</b>  | version lock; approved assumptions; scenario basis; period/currency consistency                            |
| <b>BLM role</b>               | Build scenarios and explain variance; forecasts remain estimates, not commitments. | <b>Dependencies</b>       | FIN-01, DAT-04, GOV-01                                                                                     |
| <b>Applicability triggers</b> | growing businesses; multi-team planning; capital constrained firms                 | <b>Authority boundary</b> | No forecast without stated assumptions/baseline.                                                           |

**FIN-07 - Costing, Profitability & Management Accounting [CONDITIONAL]**

|                               |                                                                                                          |                           |                                                                                                                             |
|-------------------------------|----------------------------------------------------------------------------------------------------------|---------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| <b>Outcome</b>                | Attribute economics to products, customers, projects, channels or sites using explicit cost definitions. | <b>Building blocks</b>    | Cost objects; Cost rates; Allocation rules; Contribution; Project/product/customer margin; Variance bridges; Unit economics |
| <b>Canonical records</b>      | CostObject; CostRate; AllocationRule; ProfitabilityView                                                  | <b>Key workflows</b>      | Set cost basis; Allocate cost; Calculate governed margin; Bridge variance; Review profitability                             |
| <b>Metrics</b>                | gross margin; contribution; project margin; customer margin; cost-to-serve                               | <b>Rules / decisions</b>  | formula version; allocation method; cost classification; zero/missing data policy                                           |
| <b>BLM role</b>               | Route to deterministic calculations and diagnose drivers; never improvise authoritative formulas.        | <b>Dependencies</b>       | FIN-01, DAT-02                                                                                                              |
| <b>Applicability triggers</b> | multi-product; project services; retail; manufacturing                                                   | <b>Authority boundary</b> | Metric variant and grain must be explicit.                                                                                  |

**FIN-08 - Tax, Localization & Statutory Reporting Boundary [CONDITIONAL]**

|                               |                                                                                                                         |                           |                                                                                                                                     |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| <b>Outcome</b>                | Apply jurisdiction-aware tax/localization mappings and prepare compliant reporting through current authoritative logic. | <b>Building blocks</b>    | Tax profiles; Fiscal positions; Jurisdiction mapping; Statutory report interfaces; Filing/e-invoice boundary; Localization packages |
| <b>Canonical records</b>      | TaxProfile; Jurisdiction; FiscalPosition; StatutoryReport                                                               | <b>Key workflows</b>      | Determine applicable tax route; Prepare return data; Validate localization; Export filing                                           |
| <b>Metrics</b>                | tax exceptions; filing readiness; localization coverage; e-invoice failures                                             | <b>Rules / decisions</b>  | current jurisdiction rule; effective date; legal entity; tax authority source                                                       |
| <b>BLM role</b>               | Identify required fresh source and explain data; never invent current tax law/rates.                                    | <b>Dependencies</b>       | FIN-01, FND-01, FND-06                                                                                                              |
| <b>Applicability triggers</b> | tax-registered entities; multi-country; regulated e-invoicing                                                           | <b>Authority boundary</b> | Current legal/tax authority sits outside model weights.                                                                             |

| <b>Applicability triggers</b> | asset-intensive businesses                                                                                        | <b>Authority boundary</b> | Physical asset operations and financial asset accounting remain separate views.                                   |

## Operations & Supply

### OPS-01 - Procurement, Requisition & Sourcing [CONDITIONAL]

|                               |                                                                                         |                           |                                                                                                          |
|-------------------------------|-----------------------------------------------------------------------------------------|---------------------------|----------------------------------------------------------------------------------------------------------|
| <b>Outcome</b>                | Convert business need into approved sourcing and purchasing decisions.                  | <b>Building blocks</b>    | Purchase requisition; RFQ; Bid/quote comparison; Sourcing event; Approval; Purchase order; Contract link |
| <b>Canonical records</b>      | Requisition; RFQ; SupplierQuote; PurchaseOrder; SourcingEvent                           | <b>Key workflows</b>      | Request need; Approve requisition; Source; Evaluate bid; Award; Issue PO                                 |
| <b>Metrics</b>                | procurement cycle; savings boundary; PO compliance; approval latency; maverick spend    | <b>Rules / decisions</b>  | approval threshold; preferred supplier; competitive bid; budget availability                             |
| <b>BLM role</b>               | Compare offers and draft sourcing recommendations; award/PO issuance is approval-gated. | <b>Dependencies</b>       | OPS-02, FIN-04, GOV-03                                                                                   |
| <b>Applicability triggers</b> | external purchasing beyond ad hoc spend                                                 | <b>Authority boundary</b> | Do not optimize solely on unit price; expose total-cost/risk trade-offs.                                 |

### OPS-02 - Supplier, Vendor & Third-Party Management [CONDITIONAL]

|                               |                                                                                       |                           |                                                                                                                    |
|-------------------------------|---------------------------------------------------------------------------------------|---------------------------|--------------------------------------------------------------------------------------------------------------------|
| <b>Outcome</b>                | Manage supplier identity, qualification, performance, risk and relationships.         | <b>Building blocks</b>    | Supplier master; Qualification; Capabilities; Terms; Performance scorecard; Risk/due diligence; Corrective actions |
| <b>Canonical records</b>      | Supplier; SupplierQualification; SupplierPerformance; SupplierRisk                    | <b>Key workflows</b>      | Register; Qualify; Review; Suspend/reactivate; Remediate                                                           |
| <b>Metrics</b>                | OTIF supplier; quality; lead time; concentration; risk closure                        | <b>Rules / decisions</b>  | approved supplier; risk threshold; conflict/related party; suspension authority                                    |
| <b>BLM role</b>               | Summarize evidence and supplier trade-offs; never allege misconduct without evidence. | <b>Dependencies</b>       | FND-03, OPS-01, GOV-04                                                                                             |
| <b>Applicability triggers</b> | material suppliers; outsourcing; regulated supply chain                               | <b>Authority boundary</b> | Supplier status changes require authorized evidence.                                                               |

### OPS-03 - Inventory & Stock Control [CONDITIONAL]

|                               |                                                                                                        |                           |                                                                                                                          |
|-------------------------------|--------------------------------------------------------------------------------------------------------|---------------------------|--------------------------------------------------------------------------------------------------------------------------|
| <b>Outcome</b>                | Maintain trustworthy stock positions, reservations, lot/serial traceability and replenishment signals. | <b>Building blocks</b>    | Item stock master; On-hand/available; Location stock; Reservations; Movements; Lot/serial; Counts; Expiry; Replenishment |
| <b>Canonical records</b>      | StockPosition; Location; Lot; Serial; Reservation; Movement; Count                                     | <b>Key workflows</b>      | Receive; Move; Reserve; Release; Adjust; Count; Replenish; Quarantine                                                    |
| <b>Metrics</b>                | inventory accuracy; stockout; turns; days inventory; expiry; adjustments                               | <b>Rules / decisions</b>  | negative stock policy; lot/serial; reservation; adjustment authority; unit conversion                                    |
| <b>BLM role</b>               | Diagnose stock errors and shortages; adjustments remain governed transactions.                         | <b>Dependencies</b>       | REV-03, OPS-04, FIN-07                                                                                                   |
| <b>Applicability triggers</b> | owned/controlled physical stock                                                                        | <b>Authority boundary</b> | Missing inventory record is not zero inventory.                                                                          |

### OPS-04 - Warehouse, Barcode & Material Handling [CONDITIONAL]

|                               |                                                                                                             |                           |                                                                                                                  |
|-------------------------------|-------------------------------------------------------------------------------------------------------------|---------------------------|------------------------------------------------------------------------------------------------------------------|
| <b>Outcome</b>                | Control physical receiving, putaway, storage, picking, packing and counting execution.                      | <b>Building blocks</b>    | Warehouse/site; Bins/locations; Putaway; Picking waves; Packing; Barcode/mobile tasks; Cycle count; Dock/staging |
| <b>Canonical records</b>      | Warehouse; Bin; Pick; Pack; HandlingUnit; CountTask                                                         | <b>Key workflows</b>      | Receive/putaway; Pick; Pack; Stage; Ship handoff; Count                                                          |
| <b>Metrics</b>                | dock-to-stock; pick accuracy; pick rate; space utilization; cycle count variance                            | <b>Rules / decisions</b>  | location eligibility; blocked stock; pick sequence; handling unit                                                |
| <b>BLM role</b>               | Prioritize work and diagnose bottlenecks; no physical movement posted without operator/system confirmation. | <b>Dependencies</b>       | OPS-03, OPS-05, FND-04                                                                                           |
| <b>Applicability triggers</b> | warehouses; retail backroom; distribution/manufacturing                                                     | <b>Authority boundary</b> | BLM plans/assists; WMS transactions are operational truth.                                                       |

### OPS-05 - Fulfillment, Shipping & Returns [CONDITIONAL]

|                               |                                                                                      |                           |                                                                                                                                          |
|-------------------------------|--------------------------------------------------------------------------------------|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Outcome</b>                | Turn committed orders into delivery, proof, exception and return outcomes.           | <b>Building blocks</b>    | Fulfillment order; Allocation; Pick/pack handoff; Shipment; Delivery proof; Return authorization; Return receipt; Refund/credit boundary |
| <b>Canonical records</b>      | FulfillmentOrder; Shipment; Delivery; Return; RMA                                    | <b>Key workflows</b>      | Release; Ship; Deliver; Record POD; Authorize return; Receive return; Close                                                              |
| <b>Metrics</b>                | OTIF; fill rate; shipment cycle; return rate; delivery exceptions                    | <b>Rules / decisions</b>  | release eligibility; carrier/service; return policy; refund authority                                                                    |
| <b>BLM role</b>               | Explain delays and recommend exceptions; shipment/refund execution remains governed. | <b>Dependencies</b>       | REV-08, OPS-03, FIN-02                                                                                                                   |
| <b>Applicability triggers</b> | physical fulfillment; ecommerce; distribution                                        | <b>Authority boundary</b> | No promise date without capacity/availability evidence.                                                                                  |

**OPS-06 - Transportation, Fleet & Logistics [CONDITIONAL]**

|                               |                                                                                              |                           |                                                                                               |
|-------------------------------|----------------------------------------------------------------------------------------------|---------------------------|-----------------------------------------------------------------------------------------------|
| <b>Outcome</b>                | Plan and execute transport capacity, routes, shipments, carriers and fleet operations.       | <b>Building blocks</b>    | Transport order; Route/stop; Carrier; Fleet/vehicle; Dispatch; Tracking; POD; Dwell/exception |
| <b>Canonical records</b>      | TransportOrder; Route; Stop; Carrier; Vehicle; TrackingEvent                                 | <b>Key workflows</b>      | Plan route; Tender; Dispatch; Track; Replan exception; Confirm delivery                       |
| <b>Metrics</b>                | cost/km; vehicle utilization; dwell; OTIF; empty miles; carrier performance                  | <b>Rules / decisions</b>  | driver/vehicle eligibility; route constraints; service windows; carrier authority             |
| <b>BLM role</b>               | Optimize scenarios with explicit constraints; dispatch changes require operational approval. | <b>Dependencies</b>       | OPS-05, OPS-09, DAT-05                                                                        |
| <b>Applicability triggers</b> | fleet/logistics; last mile; 3PL                                                              | <b>Authority boundary</b> | Optimization cannot ignore safety/legal constraints.                                          |

**OPS-07 - Manufacturing, MRP & Production Execution [CONDITIONAL]**

|                               |                                                                                                         |                           |                                                                                                                                        |
|-------------------------------|---------------------------------------------------------------------------------------------------------|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| <b>Outcome</b>                | Plan materials/capacity and execute production using BOM/recipe, routing and work orders.               | <b>Building blocks</b>    | BOM/recipe; Routing; Work center/line; MPS/MRP inputs; Work order; Material issue; Production output; WIP; Scrap/by-product; Genealogy |
| <b>Canonical records</b>      | BOM; Recipe; Routing; WorkCenter; WorkOrder; WIP; ProductionEvent                                       | <b>Key workflows</b>      | Plan; Release work order; Issue material; Start/complete operation; Report output/scrap; Close                                         |
| <b>Metrics</b>                | throughput; schedule attainment; yield; OEE inputs; WIP; scrap; unit cost                               | <b>Rules / decisions</b>  | BOM version; material availability; work-center capacity; quality hold; close criteria                                                 |
| <b>BLM role</b>               | Explain plan variance/bottlenecks and propose scenarios; shop-floor confirmations remain authoritative. | <b>Dependencies</b>       | OPS-03, OPS-08, OPS-09, FIN-07                                                                                                         |
| <b>Applicability triggers</b> | manufacturing/processing                                                                                | <b>Authority boundary</b> | Do not treat generic manufacturing route as universal; archetype-specific packs specialize it.                                         |

**OPS-08 - Quality, Inspection & CAPA [CONDITIONAL]**

|                               |                                                                                            |                           |                                                                                                                                                         |
|-------------------------------|--------------------------------------------------------------------------------------------|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Outcome</b>                | Define acceptable output, inspect evidence, control nonconformance and prevent recurrence. | <b>Building blocks</b>    | Quality standard; Inspection plan; Inspection result; Nonconformance; Hold/release; Root cause; Corrective/preventive action; Supplier/customer quality |
| <b>Canonical records</b>      | QualityStandard; Inspection; Nonconformance; CAPA; QualityHold                             | <b>Key workflows</b>      | Inspect; Record defect; Hold; Investigate; Correct; Release; Verify CAPA                                                                                |
| <b>Metrics</b>                | FPY; defect rate; rework; scrap; complaints; CAPA aging                                    | <b>Rules / decisions</b>  | acceptance criteria; release authority; severity; sampling method                                                                                       |
| <b>BLM role</b>               | Summarize patterns/root-cause hypotheses; release disposition remains authorized.          | <b>Dependencies</b>       | GOV-03, FND-07                                                                                                                                          |
| <b>Applicability triggers</b> | manufacturing; labs; healthcare; service quality                                           | <b>Authority boundary</b> | Correlation is not root cause; retain evidence and alternatives.                                                                                        |

**OPS-09 - Physical Assets, Equipment & Maintenance [CONDITIONAL]**

|                               |                                                                                                  |                           |                                                                                                                                                           |
|-------------------------------|--------------------------------------------------------------------------------------------------|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Outcome</b>                | Maximize safe/economic asset availability through lifecycle, inspection and maintenance control. | <b>Building blocks</b>    | Asset/equipment register; Criticality; Location/assignment; Maintenance plan; Work order; Inspection; Failure/downtime; Spare parts; Warranty; Retirement |
| <b>Canonical records</b>      | Asset; Equipment; MaintenancePlan; MaintenanceWorkOrder; Failure; Inspection                     | <b>Key workflows</b>      | Commission; Inspect; Plan maintenance; Report failure; Repair; Return service; Retire                                                                     |
| <b>Metrics</b>                | availability; downtime; MTBF/MTTR; maintenance cost; PM compliance                               | <b>Rules / decisions</b>  | criticality; maintenance trigger; safety hold; retirement authority                                                                                       |

## 5. Cross-Module Value Streams

**Why this matters:** business outcomes cross module boundaries. BLM should reason from value streams and capabilities, then select modules that cover the end-to-end chain.

| ID    | Value stream            | Outcome chain                                                          | Typical module composition                     |
|-------|-------------------------|------------------------------------------------------------------------|------------------------------------------------|
| VS-01 | Lead-to-Revenue         | Interest -> qualified demand -> offer -> agreement -> revenue          | REV-01, REV-02, REV-05, REV-06, REV-07, FIN-02 |
| VS-02 | Order-to-Cash           | Order -> fulfillment -> invoice -> collection                          | REV-08, OPS-03, OPS-05, FIN-02, FIN-03, FIN-05 |
| VS-03 | Procure-to-Pay          | Need -> source -> order -> receive -> supplier invoice -> pay          | OPS-01, OPS-02, OPS-03, FIN-04, FIN-05         |
| VS-04 | Project-to-Profit       | Engagement -> plan -> resource -> deliver -> bill -> margin            | REV-07, OPS-10, PEO-07, FIN-02, FIN-07         |
| VS-05 | Hire-to-Productivity    | Need role -> recruit -> onboard -> schedule -> perform -> develop      | PEO-02, PEO-03, PEO-04, PEO-06, PEO-07         |
| VS-06 | Record-to-Report        | Transactions -> reconcile -> close -> report                           | FIN-01, FIN-04, FIN-05, FIN-08, DAT-03         |
| VS-07 | Issue-to-Resolution     | Problem -> triage -> act -> verify -> close                            | REV-09, FND-04, FND-08, DAT-06                 |
| VS-08 | Plan-to-Produce         | Demand -> plan -> material -> production -> quality -> output          | DAT-04, OPS-03, OPS-07, OPS-08, OPS-09         |
| VS-09 | Inventory-to-Fulfilment | Receive -> store -> reserve -> pick/pack -> ship -> return             | OPS-03, OPS-04, OPS-05                         |
| VS-10 | Asset-to-Availability   | Acquire -> deploy -> inspect -> maintain -> retire                     | OPS-09, FIN-09                                 |
| VS-11 | Compliance-to-Evidence  | Obligation -> control -> execution -> evidence -> review               | GOV-04, GOV-03, FND-07, FND-05                 |
| VS-12 | Insight-to-Action       | Signal -> evidence -> diagnosis -> decision -> approval -> action      | DAT-01, DAT-02, DAT-03, DAT-08, FND-04         |
| VS-13 | Customer-to-Retention   | Onboard -> adopt -> serve -> realize value -> renew/expand             | REV-01, REV-09, REV-10, REV-07                 |
| VS-14 | Strategy-to-Execution   | Objective -> portfolio -> initiative -> delivery -> benefits -> review | GOV-01, GOV-02, DAT-03, DAT-08                 |
| VS-15 | Incident-to-Recovery    | Detect -> contain -> respond -> recover -> evidence -> learn           | GOV-05, GOV-04, FND-08, FND-07                 |

## 6. Scale-to-Maturity Overlay

**Scale changes maturity and control depth more than it changes the underlying capability list.** Do not install enterprise modules simply because revenue is high; topology, risk, process variety and coordination complexity matter.

| Scale | Operating profile          | Typical target maturity | Module-selection guidance                                                                           |
|-------|----------------------------|-------------------------|-----------------------------------------------------------------------------------------------------|
| S0    | Solo / founder-led         | M1-M2                   | Minimum records, invoices/cash, contacts, tasks; avoid enterprise overhead.                         |
| S1    | Micro                      | M2                      | Structured records/forms, simple workflows, cash/customer visibility.                               |
| S2    | Small                      | M2-M3                   | Repeatable processes, functional ownership, basic approvals and management reporting.               |
| S3    | Lower-mid                  | M3-M4                   | Standardized cross-functional workflows, budgets, capacity, SoR discipline, integrations.           |
| S4    | Mid-market                 | M4-M5                   | Integrated policies, role segregation, planning, audit, automation and specialists.                 |
| S5    | Large / enterprise         | M4-M6                   | Multi-entity/local-global governance, resilience, architecture, deep integration and AI assistance. |
| S6    | Network / platform overlay | M4-M6                   | Multi-party rights, settlement, partner/franchise governance, delegated administration.             |

### 6.1 Scale triggers that can override headcount

- Multiple legal entities or jurisdictions
- Many sites/plants/warehouses/properties
- High transaction volume or 24/7 operations
- Material safety/regulatory exposure
- Complex approval/segregation requirements
- Large ecosystem of partners/franchisees/sellers
- Multiple authoritative ERP/CRM/HR systems
- High asset/inventory intensity or complex manufacturing
- Very high customer/service SLA criticality

## 7. 54 Industry-Family Module Priors

### How to read this table

All families inherit the baseline platform/governance/finance/data core listed below. The “differentiating modules” are priors triggered by the family’s typical business physics. BLM must verify the actual Business Twin before recommending installation.

**Baseline module set:** FND-01, FND-02, FND-03, FND-04, FND-05, FND-06, FND-07, FND-08, GOV-01, GOV-03, GOV-04, FIN-01, FIN-02, FIN-04, FIN-05, DAT-01, DAT-02, DAT-03, DAT-07, DAT-08

| Family ID | Flow industry family             | Operating archetype | Differentiating module priors                                                                                                                  |
|-----------|----------------------------------|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| FAM-001   | Crop Agriculture                 | AGRICULTURE         | REV-01, REV-03, REV-04, OPS-01, OPS-02, OPS-03, OPS-06, OPS-08, OPS-09, PEO-04, PEO-07, FIN-07, DAT-04                                         |
| FAM-002   | Livestock / Poultry / Dairy      | AGRICULTURE         | REV-01, REV-03, REV-04, OPS-01, OPS-02, OPS-03, OPS-06, OPS-08, OPS-09, PEO-04, PEO-07, FIN-07, DAT-04                                         |

## 7.1 Overlay families

- FAM-015 E-commerce / D2C: overlay REV-02 + REV-08 + OPS-05 + REV-09/10 on the underlying product/service industry.
- FAM-049 Franchise / Multi-unit: overlay governance, multi-entity/unit reporting, standards/audit, royalty/settlement and delegated administration on the underlying operating industry.

## 8. BLM Module Recommendation Contract

A module recommendation should be a structured evidence-backed object, not “this industry usually uses X.”

```
ModuleRecommendation {
  moduleId
  capabilityIds[]
  needProbability
  confidence
  criticality
  priority          // P0-P4
  targetMaturity    // M0-M7
  timing            // NOW | NEXT | LATER | NEVER | EXTERNAL
  directEvidence[]
  inferredEvidence[]
  negativeEvidence[]
  dependencies[]
  substitutes[]
  currentCoverage[]
  systemOfRecordPolicy
  requiredBuildingBlocks[]
  requiredWorkflows[]
  requiredRules[]
  requiredMetrics[]
  requiredIntegrations[]
  authorityBoundaries[]
  why
  whyNotAlternatives[]
  missingInformation[]
}
```

### 8.1 Recommendation outcomes

**INSTALL\_NOW:** Flow should own/provide capability now.

**INSTALL\_NEXT:** Required, but not first deployment wave.

**DEFER:** Useful later; current complexity does not justify it.

**EXTERNAL\_SYSTEM\_REMAINS\_SOR:** Keep external authoritative system and integrate.

**READ\_ONLY\_OVERLAY:** BLM can reason over the data but Flow does not own writes.

**REPLACE\_EXISTING:** Replace only when benefit exceeds migration/change burden.

**DO\_NOT\_INSTALL:** Not applicable or harmful overbuild.

**NEEDS\_INFORMATION:** Cannot responsibly decide yet.

### 8.2 Discovery questions that materially change module selection

- What do customers primarily pay you for?
- How do you charge: product sale, project, subscription, transaction, rental, commission or mixed?
- What happens from accepted demand to delivered outcome?
- Do you hold stock, lots/serials or perishable/regulated inventory?
- Which assets can stop operations if unavailable?
- How is workforce capacity scheduled: shift, billable, field, licensed or contractor?
- Which systems are authoritative today for customers, operations, inventory, money and people?
- Which licenses, regulators, audits or jurisdictions matter?
- Where do you reconstruct data manually, lose money, wait, rework or bypass controls?
- Which actions require approval, segregation or human judgment?

## 9. Building Block Engine Interface

Approved module selection becomes executable only after decomposition into typed building blocks.

```
BuildingBlockPlan {
  approvedCapabilityIds[]
  modules[]
  targetMaturityByCapability{}
  canonicalEntitiesAndRelationships[]
  documents[]
  workflowTemplatesAndParameters[]
  rolePermissionTemplates[]
  businessLogicAndDecisionRuleIds[]
  uiBlocksAndViews[]
  blmSkillsAndExpertisePacks[]
  integrationAdapterCapabilities[]
  systemOfRecordPolicies[]
  notificationApprovalPolicies[]
  migrationMappings[]
}
```

```

implementationWave
evidenceRefs[]
approvalRequirements[]
architectureFingerprint
}

```

## 9.1 Implementation waves

**Wave 0 - Observe:** Understand current business - Read-only connectors/import, Business Twin, evidence

**Wave 1 - Core control:** Make business operable - P0 entities, roles, workflows, finance/control boundaries

**Wave 2 - Integrate:** Remove fragmentation - Cross-domain handoffs, SoR integrations, analytics

**Wave 3 - Optimize:** Improve economics - Capacity, profitability, forecasting, exception management

**Wave 4 - Assist:** BLM augments work - Skills, diagnostics, drafting, recommendations

**Wave 5 - Governed action:** Bounded automation - Action Wall approvals and monitored execution

## 10. AI / Deterministic / Human Authority Matrix

| Request type        | Example                              | Preferred authority          | BLM role                                     |
|---------------------|--------------------------------------|------------------------------|----------------------------------------------|
| Direct read         | Open invoice/customer/project status | Authorized database / SoR    | Interpret request; summarize verified record |
| Filter/aggregate    | List overdue invoices                | Deterministic business query | Translate semantics; explain results         |
| Calculation         | Margin, aging, utilization           | Business Logic Registry      | Select metric; explain derivation            |
| Validation          | Can state/posting transition occur?  | Rule/state engine            | Interpret intent; show rule result           |
| Decision table      | Discount/credit/eligibility          | Deterministic decision       | Collect inputs; explain outcome              |
| Document draft      | Proposal/email/SOW                   | LLM + governed context       | Draft only                                   |
| Diagnosis           | Why margin/cash/service changed      | BLM + metric/driver graph    | Evidence-backed reasoning                    |
| Forecast/statistics | Demand/cash/anomaly                  | Statistical engine           | Explain assumptions/uncertainty              |
| Optimization        | Staffing/inventory/routing           | Optimization engine          | Formulate and explain constraints            |
| Current external    | Tax/regulation/current standard      | Live authoritative source    | Retrieve/compare; no model-memory authority  |
| Action              | Post/send/pay/terminate/assign       | Action Wall + executor       | Propose/request approval; no direct mutation |

## 11. BLM Evaluation for Module Intelligence

**Requirement precision:** Avoid unnecessary P0/P1 modules.

**Requirement recall:** Do not miss critical capabilities.

**P0 miss rate:** Near zero for oracle/regulated fixtures.

**Overbuild rate:** Measure unnecessary module/building-block recommendations.

**Question efficiency:** Minimal questions to stable blueprint.

**SoR integrity:** No accidental duplicate authoritative ownership.

**Portability:** Same capability realized by Flow-native or external adapter.

**Security:** No tenant/action/prompt-injection boundary violation.

**Explainability:** Why/why-not, evidence and derivation chain available.

**Historical reproducibility:** Versions/fingerprints reproduce the same blueprint.

**Cost/change burden:** Prefer minimum sufficient solution, not maximum feature set.

## 12. Practical ERP / Process Cross-Check

**Current implementation evidence supports the breadth of the registry.** Odoo 19 documents finance, CRM/sales, POS/subscriptions/rental, inventory/manufacturing/purchase/quality/maintenance, HR, marketing, projects/field service/helpdesk and productivity/configuration domains. SAP S/4HANA 2025 FPS01 documents line-of-business coverage across assets, finance, HR, manufacturing, R&D/engineering, sales, service, sourcing/procurement and supply chain. ERPNext documentation similarly integrates accounting with buying, selling, stock, manufacturing, assets and projects. Microsoft's July 2026 Dynamics business-process catalog reports 6,834 rows, reinforcing that implementation processes become deep and versioned beneath stable domain/module abstractions.

### Important boundary

Vendor module lists are implementation evidence only. Flow module IDs remain vendor-neutral and should map to Flow-native capabilities, SAP, Dynamics, Odoo, ERPNext or custom APIs through adapters rather than change BLM semantics.

## 13. Research Sources and Licensing Boundary

| ID  | Source                                                                 | Locator              | Use in this document                                                                                                 |
|-----|------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------|
| R01 | Flow BLM Factual Business Architecture Library v1.0                    | Internal Flow source | Reusable capabilities before modules; process/workflow/decision/document separation; requirement priorities.         |
| R02 | Flow BLM Superintelligence Business Knowledge & Mathematics Library v3 | Internal Flow source | Three-graph architecture, 24 capability families, M0-M7 maturity, minimal-solution optimizer, Building Block Engine. |

| ID  | Source                                                              | Locator                                                                                                                                                                                                               | Use in this document                                                                                                                                      |

**Licensing rule.** This document uses standards as architectural references and Flow-designed paraphrased mappings. It does not grant permission to bulk-copy proprietary or restricted process taxonomies into a commercial training corpus. Source/license governance from Task 001 should decide allowed uses.

## Appendix A. Compact 60-Module Index

| Module ID | Module                                        | Group              | Class       | Primary outcome                                                                                            |
|-----------|-----------------------------------------------|--------------------|-------------|------------------------------------------------------------------------------------------------------------|
| FND-01    | Organization, Workspace & Legal-Entity Core   | Foundation         | FOUNDATION  | Represent the organization, entities, branches, sites and workspace boundaries consistently.               |
| FND-02    | Identity, Access, Roles & Segregation         | Foundation         | FOUNDATION  | Ensure every read, decision and action occurs under explicit identity, role and permission boundaries.     |
| FND-03    | Party, Contact & Master-Data Core             | Foundation         | FOUNDATION  | Maintain canonical identities for customers, suppliers, partners, people and shared master data.           |
| FND-04    | Workflow, Case, Approval & Orchestration      | Foundation         | FOUNDATION  | Represent structured processes, adaptive cases, approvals, timers, exceptions and compensation paths.      |
| FND-05    | Documents, Records, Knowledge & Signature     | Foundation         | FOUNDATION  | Create, classify, version, approve, retain and retrieve business documents and knowledge.                  |
| FND-06    | Integration, API, Adapter & System-of-Record  | Foundation         | FOUNDATION  | Connect Flow to authoritative internal/external systems without duplicating ownership.                     |
| FND-07    | Audit, Evidence, Provenance & Business Events | Foundation         | FOUNDATION  | Make material facts, calculations, decisions and actions traceable and historically reproducible.          |
| FND-08    | Communications, Notifications & Collaboration | Foundation         | UNIVERSAL   | Coordinate people around business events through governed channels and templates.                          |
| GOV-01    | Strategy, Objectives & Operating Cadence      | Governance         | UNIVERSAL   | Translate strategy into objectives, measures, owners, initiatives and review cadence.                      |
| GOV-02    | Portfolio, Initiative & Benefits Management   | Governance         | CONDITIONAL | Select, sequence and govern initiatives under resource, risk and dependency constraints.                   |
| GOV-03    | Policy, Rule & Decision Management            | Governance         | UNIVERSAL   | Store business policies, rule classes and deterministic decision authority separately from prose.          |
| GOV-04    | Risk, Controls, Compliance & Assurance        | Governance         | UNIVERSAL   | Manage obligations, risks, controls, evidence, tests, incidents and assurance cycles.                      |
| GOV-05    | Resilience, Incident & Business Continuity    | Governance         | CONDITIONAL | Prepare for, respond to and recover from operational, cyber, supplier or infrastructure disruption.        |
| GOV-06    | ESG, Sustainability & Responsible Enterprise  | Governance         | CONDITIONAL | Govern environmental, social and governance commitments, evidence, claims and reporting boundaries.        |
| REV-01    | Customer & CRM                                | Revenue & Customer | UNIVERSAL   | Maintain customer/prospect relationships and a governed customer 360.                                      |
| REV-02    | Marketing & Demand Generation                 | Revenue & Customer | CONDITIONAL | Plan, execute and measure demand generation across channels without confusing activity with revenue.       |
| REV-03    | Product / Service Catalog & Offerings         | Revenue & Customer | UNIVERSAL   | Define what the business sells or delivers, with variants, units, lifecycle and commercial attributes.     |
| REV-04    | Pricing, Rate Plans & Commercial Terms        | Revenue & Customer | UNIVERSAL   | Manage prices, rates, discounts, effective dates and commercial authority.                                 |
| REV-05    | Opportunity, Pipeline & Sales Management      | Revenue & Customer | CONDITIONAL | Convert qualified demand into economically sound opportunities with explicit stages and forecast evidence. |
| REV-06    | CPQ, Quotation & Proposal                     | Revenue & Customer | CONDITIONAL | Convert customer need into configured, priced, approved and auditable commercial offers.                   |
| REV-07    | Contracts, Subscriptions & Entitlements       | Revenue & Customer | CONDITIONAL | Govern commercial commitments, recurring arrangements, renewals and service entitlements.                  |
| REV-08    | Order Management                              | Revenue & Customer | CONDITIONAL | Translate accepted demand into controlled fulfillment commitments.                                         |
| REV-09    | Customer Service, Case & SLA                  | Revenue & Customer | CONDITIONAL | Receive, triage, resolve and learn from customer issues under service commitments.                         |
| REV-10    | Customer Success, Renewal, Loyalty & Feedback | Revenue & Customer | CONDITIONAL | Drive adoption, realized value, retention and renewal using evidence rather than superficial engagement.   |
| FIN-01    | General Ledger, Close & Record-to-Report      | Finance            | UNIVERSAL   | Maintain governed accounting records, close periods and produce reproducible financial statements.         |
| FIN-02    | Billing, Invoicing & Accounts Receivable      | Finance            | UNIVERSAL   | Create receivables from governed commercial events and track customer balances.                            |
| FIN-03    | Credit, Collections & Receivables Risk        | Finance            | CONDITIONAL | Manage customer credit exposure, collection workflow and cash-risk interventions.                          |
| FIN-04    | Accounts Payable, Expenses & Spend Processing | Finance            | UNIVERSAL   | Control supplier liabilities and employee/business spend through matching and approvals.                   |

| Module ID | Module                                                | Group               | Class       | Primary outcome                                                                                                         |
|-----------|-------------------------------------------------------|---------------------|-------------|-------------------------------------------------------------------------------------------------------------------------|
| FIN-05    | Payments, Treasury, Cash & Bank Reconciliation        | Finance             | UNIVERSAL   | Control money movement, bank positions, reconciliation and short-term liquidity.                                        |
| FIN-06    | Budgeting, FP&A & Financial Forecasting               | Finance             | CONDITIONAL | Plan financial outcomes, compare actuals to plan and expose uncertainty.                                                |
| FIN-07    | Costing, Profitability & Management Accounting        | Finance             | CONDITIONAL | Attribute economics to products, customers, projects, channels or sites using explicit cost definitions.                |
| FIN-08    | Tax, Localization & Statutory Reporting Boundary      | Finance             | CONDITIONAL | Apply jurisdiction-aware tax/localization mappings and prepare compliant reporting through current authoritative logic. |
| FIN-09    | Capital Assets & Financial Asset Accounting           | Finance             | CONDITIONAL | Account for acquisition, capitalization, depreciation/amortization, impairment and disposal of long-lived assets.       |
| OPS-01    | Procurement, Requisition & Sourcing                   | Operations & Supply | CONDITIONAL | Convert business need into approved sourcing and purchasing decisions.                                                  |
| OPS-02    | Supplier, Vendor & Third-Party Management             | Operations & Supply | CONDITIONAL | Manage supplier identity, qualification, performance, risk and relationships.                                           |
| OPS-03    | Inventory & Stock Control                             | Operations & Supply | CONDITIONAL | Maintain trustworthy stock positions, reservations, lot/serial traceability and replenishment signals.                  |
| OPS-04    | Warehouse, Barcode & Material Handling                | Operations & Supply | CONDITIONAL | Control physical receiving, putaway, storage, picking, packing and counting execution.                                  |
| OPS-05    | Fulfillment, Shipping & Returns                       | Operations & Supply | CONDITIONAL | Turn committed orders into delivery, proof, exception and return outcomes.                                              |
| OPS-06    | Transportation, Fleet & Logistics                     | Operations & Supply | CONDITIONAL | Plan and execute transport capacity, routes, shipments, carriers and fleet operations.                                  |
| OPS-07    | Manufacturing, MRP & Production Execution             | Operations & Supply | CONDITIONAL | Plan materials/capacity and execute production using BOM/recipe, routing and work orders.                               |
| OPS-08    | Quality, Inspection & CAPA                            | Operations & Supply | CONDITIONAL | Define acceptable output, inspect evidence, control nonconformance and prevent recurrence.                              |
| OPS-09    | Physical Assets, Equipment & Maintenance              | Operations & Supply | CONDITIONAL | Maximize safe/economic asset availability through lifecycle, inspection and maintenance control.                        |
| OPS-10    | Projects, Engagements & Professional-Service Delivery | Operations & Supply | CONDITIONAL | Control scope, milestones, tasks, resources, time/cost, change and project economics.                                   |
| OPS-11    | Field Service, Dispatch & Mobile Work                 | Operations & Supply | CONDITIONAL | Schedule and execute customer/site work with technicians, parts, evidence and service outcomes.                         |
| OPS-12    | Reservation, Rental & Capacity Inventory              | Operations & Supply | CONDITIONAL | Sell time-bound capacity or assets while managing availability, rates, deposits and handover/return.                    |
| PEO-01    | Employee Core, Organization & HR Records              | People              | CONDITIONAL | Maintain employee/worker records, positions, employment status and organizational responsibility.                       |
| PEO-02    | Recruiting & Talent Acquisition                       | People              | CONDITIONAL | Manage requisitions, candidates, interviews, offers and hiring evidence.                                                |
| PEO-03    | Onboarding, Offboarding & Access Coordination         | People              | CONDITIONAL | Coordinate employment lifecycle tasks, equipment, access, training and handovers.                                       |
| PEO-04    | Time, Attendance & Leave                              | People              | CONDITIONAL | Capture working time, attendance, leave and approved timesheets with appropriate calendars.                             |
| PEO-05    | Payroll, Compensation & Benefits Boundary             | People              | CONDITIONAL | Manage compensation inputs and payroll processing while preserving jurisdiction-specific calculation authority.         |
| PEO-06    | Performance, Learning, Skills & Succession            | People              | CONDITIONAL | Develop workforce capability using role-relevant goals, skills, learning and succession evidence.                       |
| PEO-07    | Workforce Planning, Capacity & Scheduling             | People              | CONDITIONAL | Match demand with people/skills/capacity across teams, shifts, projects and sites.                                      |
| DAT-01    | Data Intake, Mapping, Quality & Reconciliation        | Data & Intelligence | UNIVERSAL   | Ingest and normalize business data while preserving source authority, quality and reconciliation evidence.              |
| DAT-02    | Metric Registry, Semantic Layer & Business Logic      | Data & Intelligence | UNIVERSAL   | Define business metrics and authoritative deterministic calculations with explicit variants and provenance.             |
| DAT-03    | Reporting, Dashboards & Executive Views               | Data & Intelligence | CONDITIONAL | Present role-appropriate verified information, exceptions and trends without hiding definitions.                        |
| DAT-04    | Planning, Forecasting & Scenario Analysis             | Data & Intelligence | CONDITIONAL | Estimate future outcomes with baseline comparison, uncertainty and versioned assumptions.                               |

| Module ID | Module                                                 | Group               | Class       | Primary outcome                                                                                                         |
|-----------|--------------------------------------------------------|---------------------|-------------|-------------------------------------------------------------------------------------------------------------------------|
| DAT-05    | Optimization, Allocation & Decision Support            | Data & Intelligence | CONDITIONAL | Choose among constrained alternatives while preserving objectives, policies and approval authority.                     |
| DAT-06    | Process Intelligence, Mining & Conformance             | Data & Intelligence | CONDITIONAL | Use event data to discover actual flow, bottlenecks, variants and control bypass.                                       |
| DAT-07    | Enterprise Knowledge, Search & Evidence Retrieval      | Data & Intelligence | CONDITIONAL | Retrieve approved internal/external knowledge with freshness, authority and source boundaries.                          |
| DAT-08    | BLM Copilot, Skills, Action Wall & Governed Automation | Data & Intelligence | UNIVERSAL   | Provide language/reasoning assistance while routing facts, calculations, decisions and actions to governed authorities. |

## Appendix B. Recommended Persistent Registry

| Registry                         | Purpose                                           |
|----------------------------------|---------------------------------------------------|
| business_capabilities            | Universal capability definitions and maturity     |
| business_modules                 | 60 module definitions, versions and applicability |
| module_building_blocks           | Typed reusable building blocks                    |
| module_capability_mappings       | Module -> capability coverage                     |
| module_dependencies              | Hard/soft dependencies and substitutes            |
| business_value_streams           | Outcome chains and module/capability composition  |
| industry_module_priors           | 54 family -> module prior/conditional mappings    |
| scale_maturity_overlays          | S0-S6 target maturity guidance                    |
| module_metric_mappings           | Metrics/logic IDs required by module              |
| module_workflow_mappings         | Process/workflow templates                        |
| module_entity_document_mappings  | Canonical information objects                     |
| module_rule_mappings             | Rule/decision IDs and authority                   |
| module_integration_mappings      | Adapter/application capabilities                  |
| workspace_module_recommendations | Evidence-backed recommendation results            |
| solution_blueprints              | Approved workspace target design and fingerprints |

## Appendix C. Codex Implementation Sequence

- C1** - Persist business\_modules + module\_building\_blocks + mappings as a versioned library release.
- C2** - Link each module to existing BusinessCapability IDs rather than duplicating capability semantics.
- C3** - Implement ModuleRequirementEngine consuming BusinessTwin + capability recommendations.
- C4** - Implement minimal-solution optimizer with EXTERNAL\_SOR / READ\_ONLY\_OVERLAY / DO\_NOT\_INSTALL outcomes.
- C5** - Implement BuildingBlockPlan compiler from approved modules and target maturity.
- C6** - Seed the 54 industry-family priors as DRAFT/REVIEWED mappings, not universal truth.
- C7** - Add synthetic businesses that test P0 misses, overbuild, SoR preservation and cross-industry composition.
- C8** - Only after deterministic tests pass, let BLM explain and recommend the module plan using evidence.
